Chilli, Bell pepper and Paprika (*Capsicum annuum* L.) (under protected conditions)

I. Subject

These test guidelines shall apply to all varieties, hybrids and parental lines of chilli(hot pepper),bell(sweet) pepper and paprika(*Capsicum annuum*L.) under protected conditions.

II. Material required

The Protection of Plant Varieties and Farmers' Rights Authority (PPV&FRA) shall decide when, where and in what quantity and quality of the seed material required for testing a variety applied for registration under the PPV&FR Act, 2001. Applicants submitting seed material from a country other than India shall make sure that all customs and quarantine requirements stipulated under relevant national legislations and regulation are complied with.

The minimum quantity of seeds to be supplied by the applicant should be:

Varieties, hybrids and parental lines for protected cultivation

Open pollinated varieties : 15 g

Hybrid and parental lines : 10 g each

The seed material should have the minimum requirements for germination capacity (>60% for OP varieties and >85% for hybrids), moisture content (<8%) and genetic purity (>98%). The seed material supplied should be visibly healthy, vigorous and free from insect pest or disease infestation.

The seed supplied must not have undergone any treatment unless the Competent Authority allow or request for such treatment. If it has been treated, full details of the treatment must be given.

III. Conduct of tests

The minimum duration of DUS test shall normally be at least two independent but similar growing seasons with reference to the ecosystem of the candidate variety.

The test shall normally be conducted at two test locations. If any essential characteristics of the candidate variety are not expressed for visual observation at these locations, the variety shall be considered for further examination at another appropriate test site or under special test protocol on expressed request of the applicant, for which additional quantity of seeds shall be required.

The test shall be carried out under conditions favoring normal growth and expression of all test characteristics. The size of the strips shall be such that plants or parts of plants could be removed for measurement and observation without prejudicing the other observations on the standing plants until the end of the growing period. Each test shall have 54 plants for protected cultivation which should be divided among three replications.

The seedlings shall be raised in portrays using soil-less media (3 parts cocopeat: 1 part vermiculite: 1 part perlite) under conditions favoring normal seed germination. The seedlings shall be provided light irrigation daily and drenching of nutrient solution with water soluble fertilizers (19:19:19) at 2g per litre of water once in a week after 15 days of germination. The seedlings shall be transplanted after 40 days of sowing.

1. The test shall be performed under protected conditions comprising strips of 15 cm height and 80 cm width. A 70 cm distance shall be maintained between the strips to carry out intercultural practices and proper aeration. There shall be three replications, with 18 plants in each replication. The plant-to-plant distance of 30 cm shall be maintained.
2. Staking shall be provided for each crop under protected conditions to utilize vertical space and proper aeration across plants, within and between rows. The bell pepper plants shall be trained on the nylon ropes keeping two stems while pinching rest of the suckers in such a fashion that plant grows vertically.
3. Drip irrigation shall be employed to supply water in the root zone of plants every day during summers and fertigation at weekly interval in the initial stages and later during flowering and fruiting at 3 days interval to harness proper growth and development. For red ripe fruits, fertigation should be withheld 10 days prior to final harvest.
4. Additional test protocols for special purposes shall be established by the PPV&FRA Authority.

IV. Methods and observations

The characteristics described in the Table of Characteristics (Section VII) shall be used for the testing of varieties for their DUS.

1. For the assessment of distinctiveness and stability, observations should be made on 30 plants or parts of 30 plants, which shall be equally divided among 3 replications (10 plants per replication).
2. For the assessment of uniformity of characteristics on the strip as a whole (visual assessment by a single observation on a group of plants or parts of plants), a population standard of 1% with an acceptance probability of at least 95% should be applied. In the case of a sample size of 54 plants, the number of off-types should not exceed 2.
3. For the assessment of colour characteristics, the latest Royal Horticultural Society (RHS) colour chart shall be used.
4. Unless otherwise indicated, all observations on the leaves and flowers should be made after the first flower starts and before the start of the harvest.
5. Unless otherwise indicated, all observations on the plant and fruit should be made at mature green/red ripe fruit stage.

6. Unless otherwise indicated, observations on the seed should be made on fully developed dry seed.

Stage of recording observations on specific characteristics will be as follows;

Description	Code
a) Cotyledons completely unfolded to two-trueleaf stage	10
b) Active vegetative phase	30
c) Appearance of flowers on 50% plants	40
d) First fruit attaining harvest maturity	60
e) First fruit attaining physiological maturity	80
f) Full maturity: approximately all fruits are shrunken, red/yellow	100

V. Grouping of varieties

1. The candidate varieties for DUS testing shall be divided into groups (hot pepper as vegetable or spice, bell pepper as vegetable and paprika as spice) to facilitate the assessment of distinctiveness. Characteristics which are known from experience not to vary or vary slightly within a variety and in which their various states fairly distributed across all varieties in the collection, are suitable for grouping purposes.

The following characteristics shall be used for grouping *Capsicum annuum* varieties

- | | | |
|------------------|---|--|
| (a) Plant | : | Habit(characteristic 2) |
| (b) Flower/Fruit | : | Orientation[characteristic 27 (a) and (b)] |
| (c) Fruit | : | Fruit bearing habit(characteristic 28) |
| (d) Fruit | : | Colour(at mature green fruit stage on plants)(characteristic 29) |
| (e) Fruit | : | Shape in longitudinal section(characteristic 33) |
| (f) Fruit | : | Colour(at ripe fruit stage on plants)(characteristic 39) |
| (g) Fruit | : | Shape at the base(characteristic 43) |
| (h) Fruit | : | Shape of apex(characteristic 44) |

VI. Characteristics and symbols

- To assess distinctiveness, uniformity and stability, the characteristics and their states as given in the Table of Characteristics (section VII) shall be used.
- Notes (1-9) shall be used to describe the state of each character for the purposes of digital data processing and these notes shall be given against the states of the different characteristics.
- Legend
 - (*) Characteristics that shall be observed during every growing season on all varieties and always be included in the description of the variety, except when the state of expression of a preceding phonological characteristic or by environmental conditions of the testing region.
 - (+) See explanations on the Table of characteristics in Section VIII. It is to be

noted that for certain characteristics the plant parts on which observations to be taken are given in the explanation offigure(s)for clarity and not for the colour variation.

4. Type of assessment of characteristics indicated in column 8 of Table of characteristics is as follows: The optimum stage of plant growth for assessment of each characteristic is indicated in the sixth column of Table of characteristics. These are explained below:

MG	:	Measurement by a single observation on a group of plants or parts of plants
MS	:	Measurement on a number on individual plant or parts of plants
VG	:	Visual assessment by a single observation on a group of plants or parts of plants
VS	:	Visual assessment by observations on individual plant or parts of plants

VIII. Explanations on the table of characteristics

Characteristic 1 (*): Seedling: Anthocyanin colouration of hypocotyls

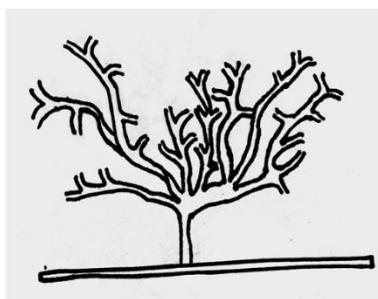

Absent (1)

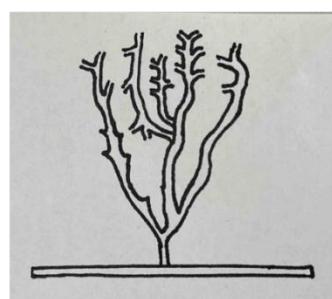

Present (9)

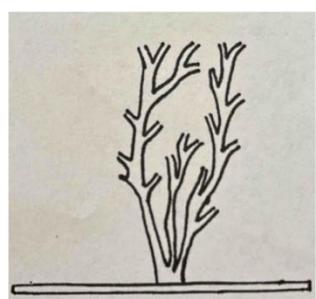

Characteristic 2 (*): Plant: Habit

Spreading (1)

Semi Upright (5)

Upright (9)

Characteristic 5 (*): Plant: Anthocyanin colouration of nodes (at active vegetative growth)

Absent (1)

Present (9)

Characteristic 6: Plant Intensity of anthocyanin colouration of nodes (at active vegetative stage)

Weak (3)

Medium (5)

Strong (7)

Characteristic 7: Plant: Anthocyanin colouration of nodes (at 50% flowering)

Absent (1)

Present (9)

Characteristic 8: Plant: Intensity of anthocyanin colouration of nodes (at 50% flowering)

Weak (3)

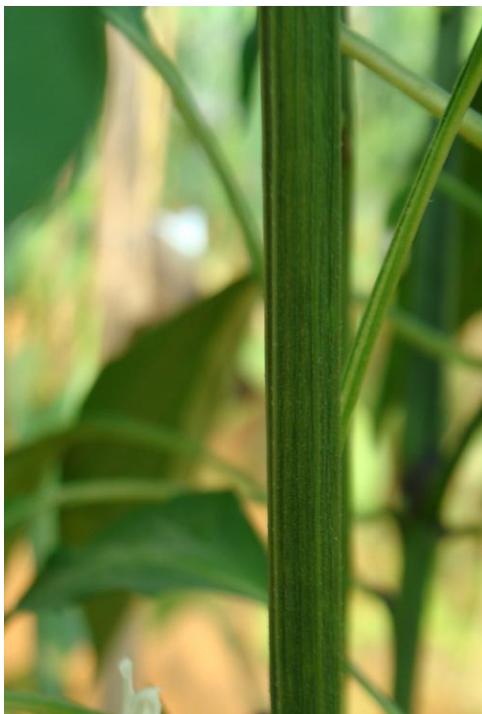

Medium (5)

Strong (7)

Characteristic 11: Stem: Anthocyanin

Absent (1)

Present (9)

Characteristic 12 (*): Stem: Pubescence (hairiness)

Absent (1)

Present (9)

Characteristic 13: Stem: Shape

Round (3)

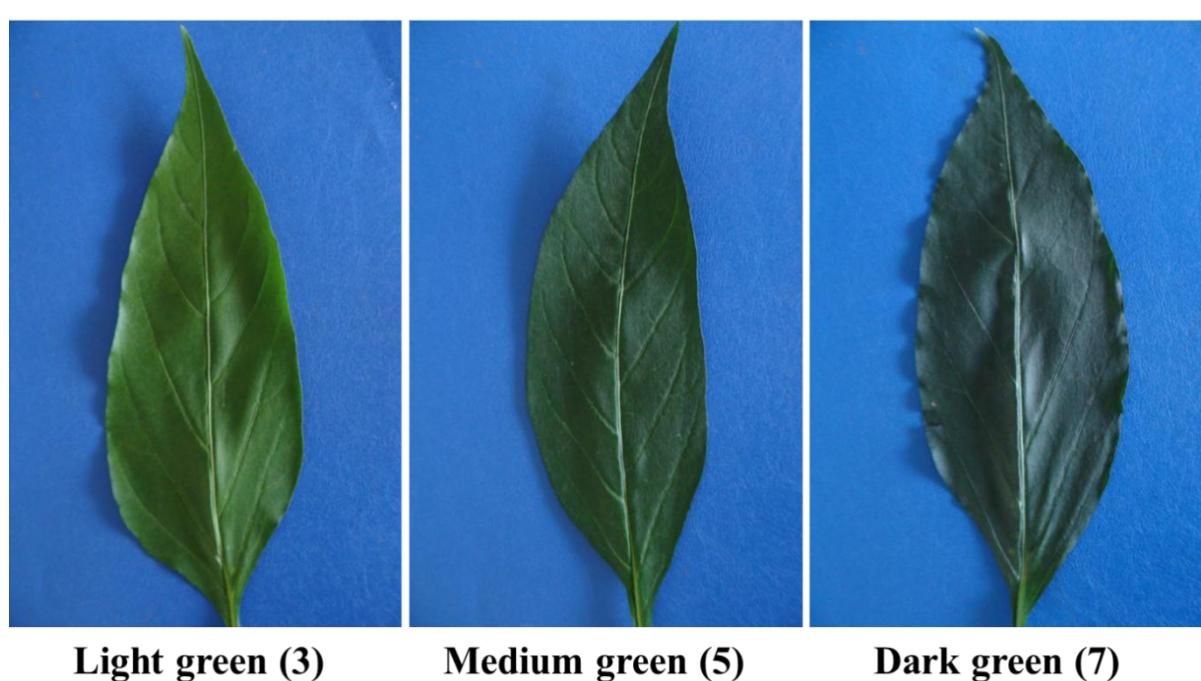

Angular (5)

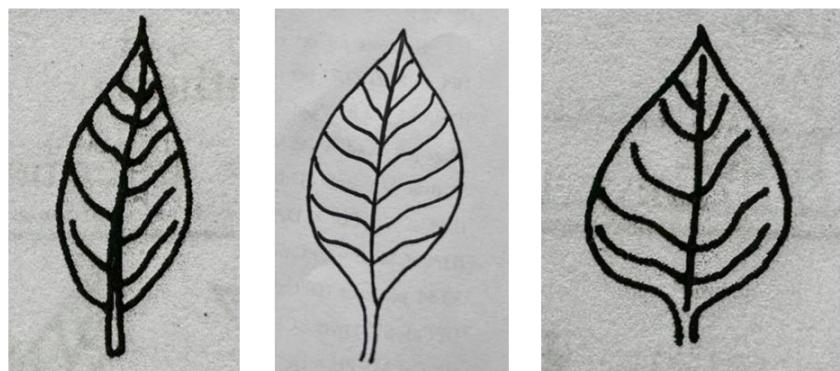

Characteristic 16: Leaf: Colour

Characteristic 17: Leaf: Intensity of colour

Characteristic 18 (+): Leaf: Shape

Lanceolate (3)

Ovate (5)

Broad Elliptic (7)

Characteristic 19: Leaf: Undulation of margin

Weak (3)

Medium (5)

Strong (7)

Characteristic 20: Leaf: Pubescence (hairiness)

Absent (1)

Present (9)

Characteristic 21: Petiole colour

Green (1)

Purple (9)

Characteristic 23 (*): Flower: Petal colour

White (3)

Yellowish white (5)

Purple (7)

Characteristic 24: Flower: Anther colour

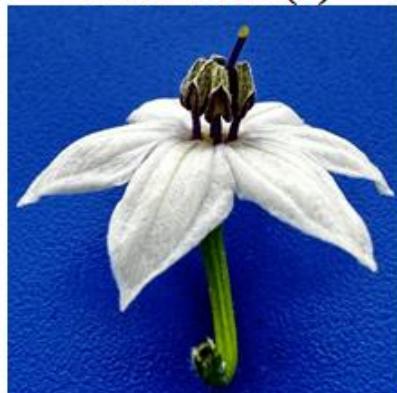

Yellow (3)

Pale Blue (5)

Blue (7)

Purple (9)

Characteristic 25: Flower: Style colour

Yellowish White (3)

Purple (5)

Characteristic 27 (a) (+): Flower orientation

Drooping (1)

Semi drooping (5)

Erect (9)

Characteristic 27 (b): Fruit orientation (Chilli and Paprika)

Drooping (1)

Erect (9)

Characteristic 27 (b): Fruit orientation (Bell Pepper)

Drooping (1)

Semi drooping (5)

Erect (9)

Characteristic 28: Fruit: Bearing habit (No. of fruits/ node)

1 (Solitary) (3)

2-3 Fruits (5)

>3 (Cluster) (7)

**Characteristic 29 (*): Fruit: Colour (at mature unripe stage)
(Chilli)**

Green (5)

Purple (7)

**Characteristic 29 (*): Fruit: Colour (at mature unripe stage)
(Capsicum)**

Cream (3)

Green (5)

Characteristic 30 (a): Fruit: Intensity of green colour (at mature unripe stage)

Light (3)

Medium (5)

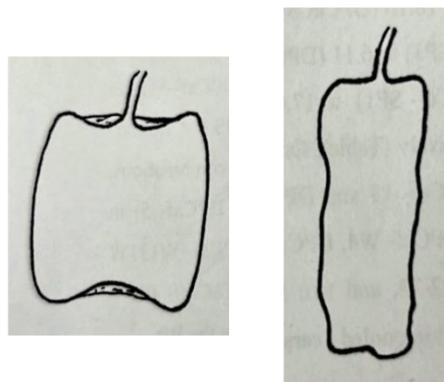

Dark (7)

Characteristic 30 (b): Fruit: Intensity of purple colour (at mature unripe stage)

Dark (7)

Characteristic 33 (*): Fruit: Shape in longitudinal section (Bell Pepper)

Square (1)

Rectangular (2)

Characteristic 33 (*) (+): Fruit: Shape in longitudinal section (Chilli and Paprika)

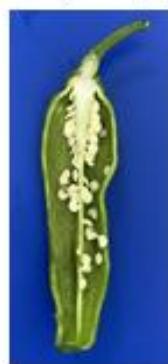

Moderately
triangular (4)

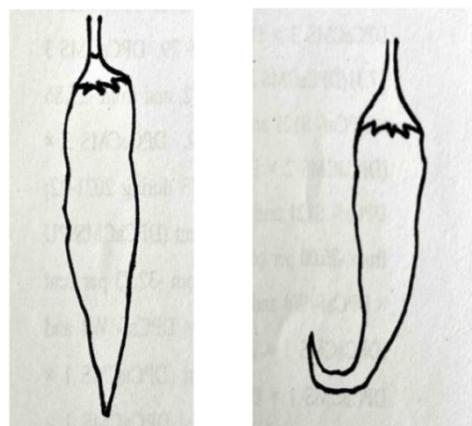

Narrowly
triangular (5)

Horn Shaped
(6)

Characteristic 34 (+): Fruit: Curvature

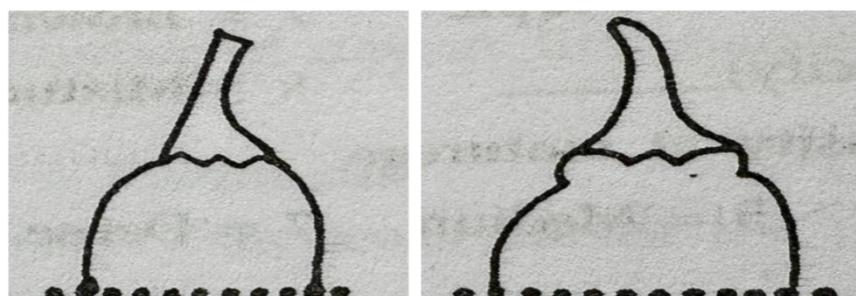

Absent (1)

Present (9)

Characteristic 35 (+): Fruit: Neck at basal end

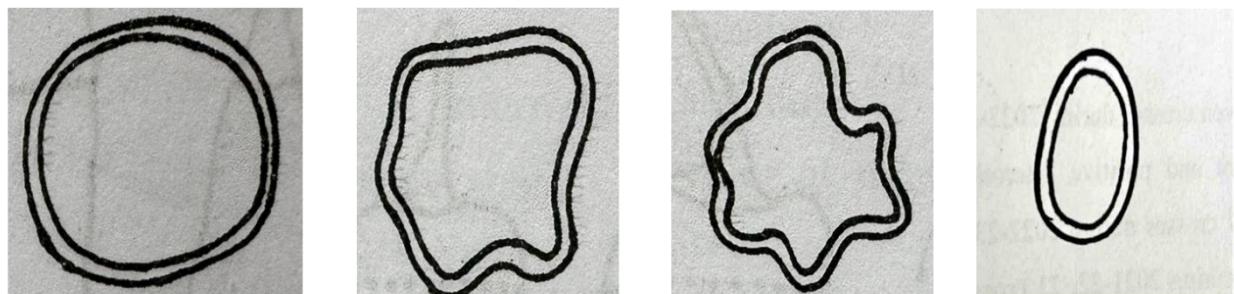

Absent (1)

Present (9)

Characteristic 36 (*) (+): Fruit: Cross sectional corrugation (at level of placenta)

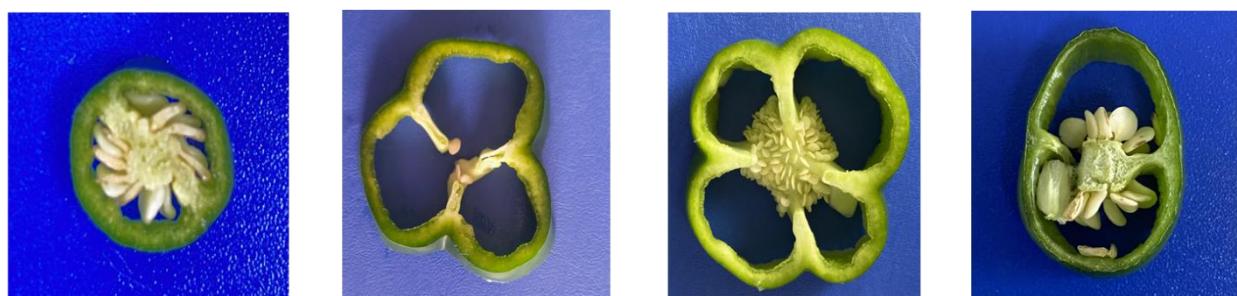

Round (3)

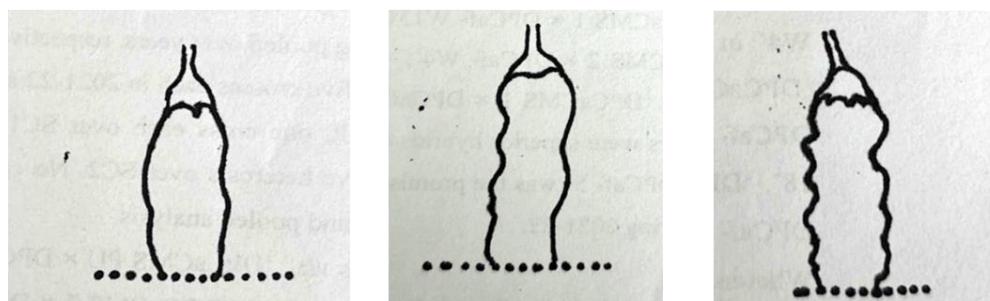

Slightly corrugated (5)

Strongly corrugated (7)

Oval (9)

Characteristic 37 (*) (+): Fruit: Situation of pericarp

Weak (3)

Medium (5)

Strong (7)

Characteristic 38 (*): Fruit: Texture of surface

Smooth (3)

Rough (5)

**Characteristic 39 (*): Fruit: Colour (at ripe maturity)
(Chilli)**

Orange (2)

Orange Red (3)

Red (4)

Characteristic 39 (*): Fruit: Colour (at ripe maturity) (Bell Pepper)

Yellow (1)

Orange Red (3)

Red (4)

Characteristic 40: Fruit: Intensity of red colour (at maturity)

Light (3)

Medium (5)

Dark (7)

Characteristic 41: Fruit: Colour transition

One Stage (3)

Two Stage (5)

> Two Stage (7)

Characteristic 42: Fruit: Glossiness

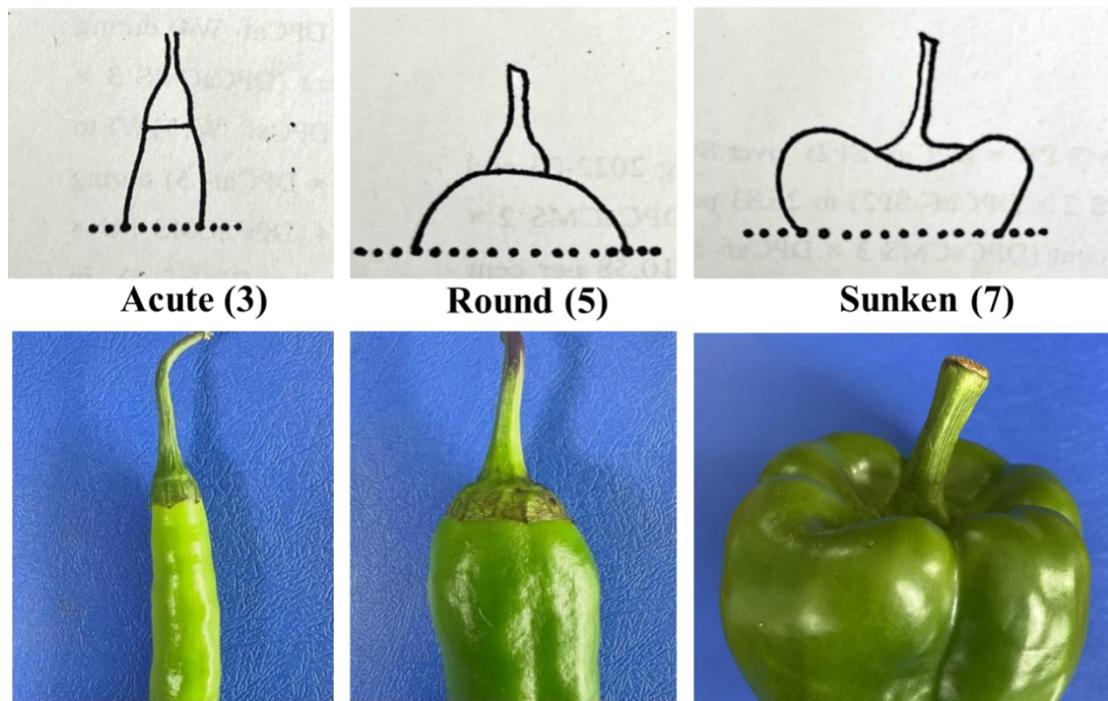

Weak (3)

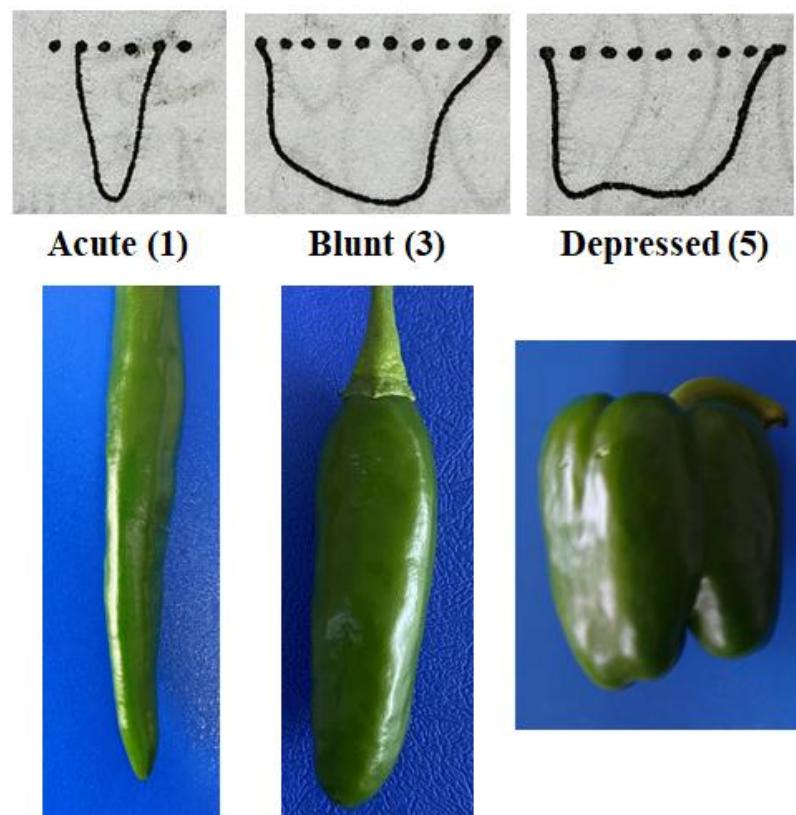

Strong (5)

Characteristic 43 (*): Fruit: Shape at the base

Characteristic 44 (+): Fruit: Shape of apex

Characteristic 45 (*): Fruit: Number of locules/ lobes (bell pepper)

Two (1)

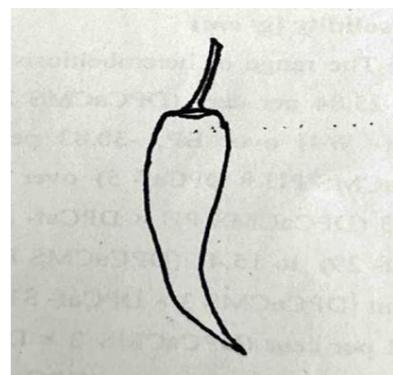

Three (2)

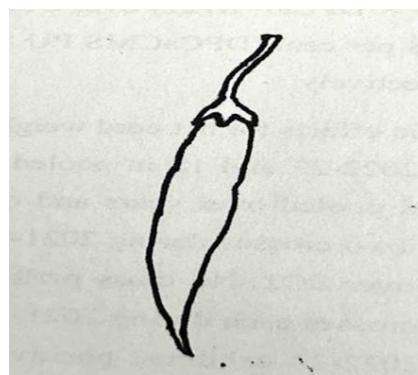

Four (3)

Characteristic 48 (+): Fruit: Calyx cover

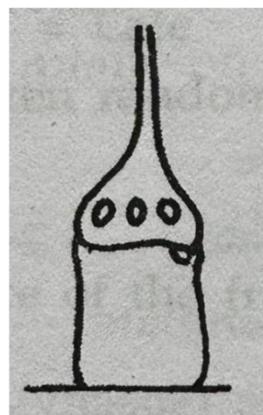

Non- Enveloping (1)

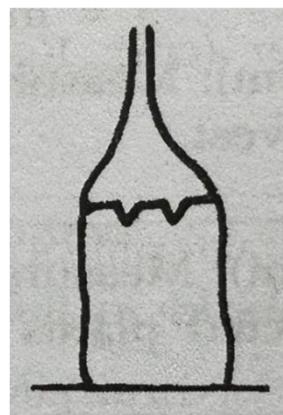

Enveloping (9)

Characteristic 49 (+): Fruit: Calyx margin

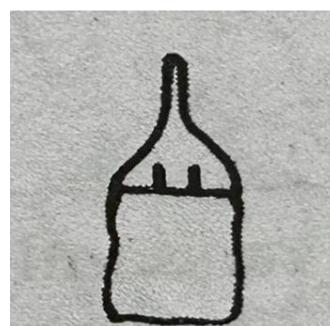

Smooth (1)

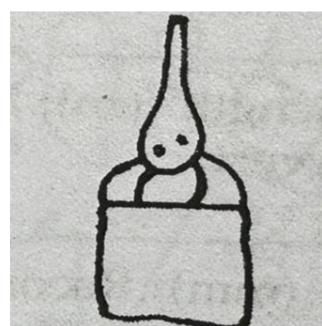

Dentate (9)

Characteristic 50 (+): Fruit: Calyx constriction

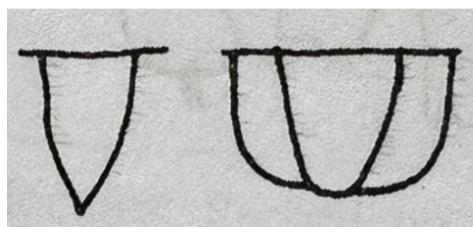

Absent (1)

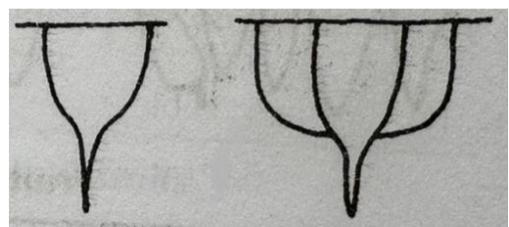

Present (9)

Characteristic 52 (+): Fruit: Blossom end appendage

Absent (1)

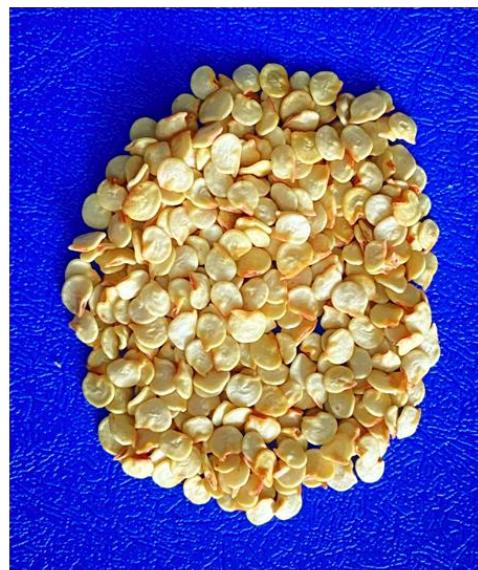

Present (9)

Characteristic 56: Seed: Colour

Light Yellow (3)

Yellow (5)

VIII. Literature: The DUS guidelines on chilli, paprika and bell pepper was used as base line for framing guidelines for protected conditions.

IX. Working Group Details:

The test guidelines were developed by the members of task force, the Nodal Officer, Co-Nodal Officers, DUS testing centers constituted by the PPV&FR Authority.

The Members of the Task Force

Dr. Pritam Kalia, Former Head, Division of Vegetable Science, IARI, New Delhi Chairman

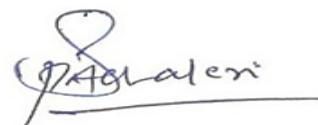

Dr. Rajesh Kumar, Project Coordinator, AICRP on Vegetable Crops, IIVR, Varanasi Member

Dr. Mohan Rao, Professor & Head, Department of Genetics & Plant Breeding, UAS, GKVK, Bengaluru Member

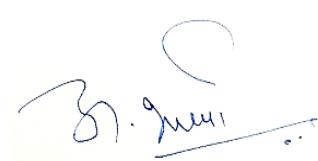

Dr. Sharan Basappa, Senior Hot Pepper Breeder, Indo-American Hybrid Seeds Pvt. Ltd, Bengaluru Member

Registrar, PPVFRA, New Delhi

Nodal Officer

Dr. Akhilesh Sharma, Professor, Department of Vegetable Science & Floriculture, CSKHPKV, Palampur

Co-Nodal Officer

Dr. Mohan Rao, Professor & Head, Department of Genetics & Plant Breeding, UAS, GKVK, Bengaluru

X. DUS test centres

Nodal DUS Centre
CSKHPKV, Palampur

Co-Nodal DUS Centre
UAS, GKVK, Bengaluru
