Ear: Type of grain (Characteristic 22)	Flint (1)

B. Distinct characteristics of candidate variety:

SYN-CO-NP 5612: It has distinguishing characters as tassel: anthocyanin colouration of anthers (in middle third of main axis on fresh anthers) is absent and ear: colour of top of grain is yellow.

C. Distinct characteristics of reference varieties:

HKI 161 & HKI 163: It has distinguishing characters as tassel: anthocyanin colouration of anthers (in middle third of main axis on fresh anthers) is present and ear: colour of top of grain is orange.

HKI 193-1: It has distinguishing characters as tassel: anthocyanin colouration of anthers (in middle third of main axis on fresh anthers) is present and ear: colour of top of grain is yellow with cap.

SYN-CO-NP5296: It has distinguishing characters as tassel: anthocyanin colouration of anthers (in middle third of main axis on fresh anthers) is absent and leaf: width of blade (leaf of upper ear) is broad.

C. Distinct characteristics of reference varieties:
HKI 163: It has distinguishing characters as tassel: anthocyanin colouration of anthers (in middle third of main axis on fresh anthers) is present and leaf: width of blade (leaf of upper ear) is narrow.
HKI 193-1: It has distinguishing characters as tassel: anthocyanin colouration of anthers (in middle third of main axis on fresh anthers) is present and leaf: width of blade (leaf of upper ear) is medium.

D. Date of commercialization of the variety	Not commercialised

E. Agronomic & commercial attributes

S. No.	**Agronomic & Commercial Attributes**	**Remarks**
1.	Days to flowering/ anthesis: early/medium/late	Late
2.	The best growing season to attain the potential yield	1st week of October to 3rd week of November
3.	Production condition: suitability area in the country	Elluru, Sathupally, Proddatur, Bhadrachalam, Rajmudary.
4.	Fertilizer requirement to attain potential yield (N.P.K) kg/acre	N.P.K: 90:65:45 kg/acre
	Other fertilizer kg/acre	S:15 Kg/acre & $ZnSO_4$: 1.5 Kg/acre
5.	Name of cropping/ climatic zone in which the variety recommended for cultivation	Tropical climatic zone
6.	Resistance/Tolerance to pests/diseases	Moderate susceptible to NCLB, highly

		susceptible to FSR & Late Wilt.
7.	Zone wise yield potential (q/acre)	-
8.	Seed yield (q/acre) (average)	20-25 q/acre.
9.	Seed: weight (100 seeds weight in gm)	200-300 gm.
10.	Any other relevant value addition information specific to the variety/hybrid in terms of trade	-

Application No. | N21 | ZM171 | 17 | 1636 | filed on 14/06/2017 by **Anuradha Verma, APAC field Crops variety registration and protection lead, Registration and Regulatory, Syngenta India Private Limited, Hyderabad Innovation Centre, Sampanbole, Telangana-500101** on behalf of **Syngenta India Private Limited, Amar Paradigm, S. No. 110/11/3, Baner road, Baner, Pune-411005, Maharashtra** for **New** variety of crop **Maize (*Zea mays* L.)** having denomination **SYN-CO-NP 5139** the specification including its drawing and or photograph(s) of which are given below, has been accepted and given registration number ---------NA ----------on ---------- NA -------
The convention application no.----- NA---------- in respect of the said variety has been filed on -----NA------, in ---NA----.

Appropriate office for the opposition of proceeding under Rule 29, of the Protection of Plant Varieties and Farmers' Rights Rules, 2003 is Office of the Registrar, PPV&FR Authority, New Delhi – 110 012.

Passport data of the variety : SYN-CO-NP 5139
Applicant : Syngenta India Private Limited
Address of the applicant : Amar Paradigm, S. No. 110/11/3, Baner Road, Baner, Pune-411005, Maharashtra
Nationality of applicant : Switzerland
Application details
a. Number : N21 | ZM171 | 17 | 1636
b. Date of receipt : 14/06/2017
c. Date of acceptance : 30/09/2026
Crop (Taxonomical lineage) : Maize (*Zea mays* L.)
Denomination : SYN-CO-NP 5139
Type of variety : New
Classification of variety : Typical
Previously proposed denomination : Not applicable
Name of parental material : Pi 3012-9-2/DK 888-412-1-1
Source of parental material : Own material
Name of reference varieties : HKI 161, HKI 163 & HKI 193-1

Variety description:

A. Grouping characteristics	**SYN-CO-NP 5139**
Tassel: Time of anthesis (Characteristic 4)	Late
Ear: Time of silk emergence (50% plants) (Characteristic 11)	Late

Ear: Anthocyanin coloration of silks (Characteristic 12)	Present
Plant: Length: Inbred lines only (Characteristic 15.1)	Short
Ear: Type of grain (Characteristic 22)	Flint

B. Distinct characteristics of candidate hybrid:

SYN-CO-NP 5139 has distinguishing characteristics as leaf attitude of blade is drooping, tassel density of spikelet is dense and ear anthocyanin colouration of silk is present.

HKI 161 has distinguishing characteristics as leaf attitude of blade is straight, tassel density of spikelet is sparse and ear anthocyanin colouration of silk is present.

HKI 163 has distinguishing characteristics as leaf attitude of blade is drooping, tassel density of spikelet is dense and ear anthocyanin colouration of silk is absent.

HKI 193-1 has distinguishing characteristics as leaf attitude of blade is straight, tassel density of spikelet is sparse and ear anthocyanin colouration of silk is absent.

D. Date of commercialization of the variety	Not commercialized.
